Re: **Compatibility with lead based coatings**

To: Whom it may concern,

We hereby certify and guarantee that all MCU products are compatible to successfully overcoat old lead based paints if these coatings have minimum substrate and intercoat adhesion. These coatings include oil based alkyds, vinyls, phenolics and others.

MCU coatings do not weaken the adhesion or cause premature failure as epoxy coatings and polyurethanes do.

MCU coatings remain flexible and breathable to allow overcoating without blistering or peeling.

If you have any questions please contact Trident Coatings.
